OPPORTUNITIES FOR RETAILING THERMAL MINERAL WATER QUANTITIES FROM AN INDIVIDUAL SOURCE DEPENDING ON THE TYPE AND NATURE OF THEIR USER ENTITIES AND THEIR PURPOSE

Vasil Yordanov¹

Abstract:

We analyze the opportunities for retailing thermal mineral water quantities from a specific source. We suggest that this be done after a more detailed substantiation of the predictable water quantities and after linking them to the purposes of the user legal entities. This would lead to a possibly more effective use of such available water resources and to the creation of a more competitive environment within a well-managed at the municipal level of competence.

Keywords:

Thermal Mineral Water Quantities, Individual Source with Outpouring Positions or Boreholes, Public State Ownership of Water, Delegation of Rights Over Municipal Water, Legal Entities using Thermal Mineral Water, Social and Economic Goals of User Entities, Opportunities to Allocate the Thermal Mineral Water for the Various Purposes of Its Use, Current Ordinance on the Payment of Thermal Mineral Water Quantities Used.
